Rules for adding new components

To admit a new component to the SoCLib library, these 3 steps must be followed

Provide necessary files

- The necessary files to describe the IP core : a *.h* and a *.cpp* files at least
- The metadata files related to the IP core

Build a test platform

- The platform must contain the IP core **AND** at least one of the IPs already admitted in the library

Write the description page

- The page is to create here
- The description should be brief, with a scheme when possible.
