

VciLocks

1) Functional Description

This VCI target is a locks controller : In VCI-based systems, it is not anymore possible to "lock the bus" to implement the atomic *test & set* instructions used for software synchronisation. Therefore, this memory mapped hardware peripheral implements a set of binary locks:

- Each binary lock is a single flip-flop, but corresponds to 4 bytes in the address space. The segment allocated to this component must be aligned on a 4 bytes boundary. The number of available locks is defined by `segment_size / 4`.
- Any read request is interpreted as a *test & set* operation : the value stored in the addressed flip-flop is returned, and the addressed flip-flop is set to 1.
- All write request are interpreted as *reset* : the addressed flip-flop is reset to 0.

This way, a spin lock is implemented as a simple loop waiting to read 0, and the lock release is a simple write operation. This components checks addresses for segmentation violation, and can be used as default target.

2) Component definition & usage

source:trunk/soclib/soclib/module/internal_component/vci_locks/caba/metadata/vci_locks.sd?

```
Uses( 'vci_locks' )
```

3) CABA Implementation

CABA sources

- interface :
source:trunk/soclib/soclib/module/internal_component/vci_locks/caba/source/include/vci_locks.h?
- implementation :
source:trunk/soclib/soclib/module/internal_component/vci_locks/caba/source/src/vci_locks.cpp?

CABA Constructor parameters

```
VciLocks(  
    sc_module_name name,      // Instance name  
    const soclib::common::IntTab &index,  // Target index  
    const soclib::common::MappingTable &mt); // Mapping Table
```

CABA Ports

- `sc_in<bool> p_resetn` : Global system reset
- `sc_in<bool> p_clk` : Global system clock
- `soclib::caba::VciTarget<vci_param> p_vci` : The VCI port

4) TLM-DT implementation

TLM-DT sources

- interface :
[source:trunk/soclib/soclib/module/internal_component/vci_locks/tlmdt/source/include/vci_locks.h?](#)
- implementation :
[source:trunk/soclib/soclib/module/internal_component/vci_locks/tlmdt/source/src/vci_locks.cpp?](#)

TLM-DT Constructor parameters

```
VciLocks(  
    sc_module_name name,    // Instance name  
    const soclib::common::IntTab &index,    // Target index  
    const soclib::common::MappingTable &mt);    // Mapping Table
```

TLM-DT Ports

- **p_vci** : VCI target port
