#### What is SoCLib

- SoCLib is an open platform for virtual prototyping of multi-processors system on chip (MP-SoC).
- The core of the platform is a library of SystemC simulation models for virtual components (IP cores), with a guaranteed path to silicon.
- The project is funded by the french ?'Agence Nationale pour la Recherche'.
- It involves 6 industrial companies and 10 laboratories? which are working together to build this platform

You may want to have a look at FeaturesDescription, or [GetAccount get an account]

## **SoCLib Library**

### **Trying SoCLib**

You may want to try SoCLib without going through the installation process? Then the SoCLib <u>Live Cd</u> may help you!

#### Code

• <u>SoCLib Components General Index</u>: contains documentation about the hardware components (IP cores) available in the SoCLib library.

## Installation, usage

• Installation Notes: how to install the SoCLib platform on your computer

## **Development**

- Adding new components to the library: the rules to follow to add a new IP core to the library.
- Soclib Cc is the current build system for SoCLib platforms

#### **SoCLib OS & Middleware**

SoCLib OS & Middleware

- <u>DNA/OS</u>: DNA/OS is a micro-kernel for MPSoCs. It supersedes MutekA, and still provides the POSIX thread API.
- MutekH: exo-kernel based OS kernel for MPSoCs with support for POSIX threads
- MutekS : Optimised, static OS for DSX
- MWMR : Hardware / Software communication middleware

#### SoCLib Tools

- <u>DSX</u> : Design Space Exploration tool
- <u>SystemCASS</u>: Fast SystemC simulation kernel
- <u>SoCView</u> : Interactive simulation environment for debug and instrumentation
- GdbServer : A GDB server for multi-processor architectures
- <u>MemoryChecker</u>: A memory access error checker similar to valgrind.
- <u>VCI Validation</u>: A library for the validation of the VCI protocol (CABA and TLM-T versions)
- <u>GAUT</u>: A high-level synthesis tool allowing to generate automatically systemC CABA and TLM-T files.

#### **SoCLib Resources**

## Mailing list

The dev@? Mailing list is public and targets general discussion about SoCLib component development.

To join the list, either

- send an email to dev-subscribe@?;
- see <a href="http://www.soclib.fr/wws/info/dev">http://www.soclib.fr/wws/info/dev</a>.

#### Writing and design guides

- General SoCLib Rules: general rules regarding the SoCLib components.
- CABA Writing Rules: rules to write SystemC CABA simulation models.
- <u>TLM-T Writing Rules</u>: rules to write SystemC TLM-T simulation models.
- <u>Processor Modeling</u>: a general method to write generic processor models.
- Endianness considerations? : Endianness rules in SoCLib

#### **Miscelaneous**

- Critères Pour Plate-Forme TLM-T: criteria defined for writing TLM-T simulation models.
- <u>SoclibCc/DesignGuide</u> is an attempt to justify the choices made in soclib-cc
- Models of documents? to be used by the project partners
- Frequently asked questions: When things goes wrong
- Benchmark: A few shared benchmarks

## **Tutorials**

- ?DSX tutorial
- Motion-JPEG and OS tutorial
