### **VciBlockDevice**

# 1) Functional Description

This VCI component is both a target and an initiator.

- It is addressed as a target to be configured for a transfer.
- It is acting as an initiator to do the transfer

There is only one block device handled by this component, limited to 2<sup>41</sup> bytes. An IRQ is optionally asserted when transfer is finished.

This hardware component checks for segmentation violation, and can be used as a default target.

It contains the following memory-mapped registers:

- BLOCK\_DEVICE\_BUFFER Physical address of the buffer in SoC memory
- BLOCK\_DEVICE\_COUNT Count of blocks to transfer
- BLOCK\_DEVICE\_LBA Base sector for transfer
- BLOCK\_DEVICE\_OP Type of operation, writing here initiates the operation. This register goes back to BLOCK\_DEVICE\_NOOP when operation is finished.
- BLOCK\_DEVICE\_STATUS State of the transfer. Reading this register while not busy resets its value to IDLE. Value may be one of
  - ♦ BLOCK DEVICE IDLE
  - ♦ BLOCK\_DEVICE\_BUSY
  - ♦ BLOCK\_DEVICE\_SUCCESS
  - ♦ BLOCK\_DEVICE\_ERROR
- BLOCK\_DEVICE\_IRQ\_ENABLE Boolean enabling the IRQ line
- BLOCK\_DEVICE\_SIZE Number of blocks addressable in the controller (read-only)
- BLOCK\_DEVICE\_BLOCK\_SIZE Block size (in bytes) (read-only)

The following operations codes are defined:

- BLOCK\_DEVICE\_NOOP Nothing
- BLOCK\_DEVICE\_READ read()
- BLOCK\_DEVICE\_WRITE write()

For extensibility issues, you should access this component using globally-defined offsets. You should include file soclib/block\_device.h from your software, it defines BLOCK\_DEVICE\_COUNT, BLOCK\_DEVICE\_READ, ...

VciBlockDevice 1

Sample code: Please see reference implementation in <a href="mailto:source:trunk/soclib/soclib/platform/topcells/caba-vgmn-block">source:trunk/soclib/soclib/platform/topcells/caba-vgmn-block</a> device-mips32el

(add -I/path/to/soclib/include to your compilation command-line)

## 2) Component definition & usage

source:trunk/soclib/soclib/module/connectivity component/vci block device/caba/metadata/vci block device.sd?

See SoclibCc/VciParameters

```
Uses( 'vci_block_device', **vci_parameters )
```

## 3) CABA Implementation

#### **CABA** sources

- interface :
  - source:trunk/soclib/soclib/module/connectivity component/vci block device/caba/source/include/vci block device.
- implementation :

source:trunk/soclib/soclib/module/connectivity component/vci block device/caba/source/src/vci block device.cpp?

### **CABA Constructor parameters**

#### **CABA Ports**

- sc\_in<bool> p\_resetn : Global system reset
- sc\_in<bool> p\_clk : Global system clock
- soclib::caba::VciTarget<vci\_param> p\_vci\_target : The VCI target port
- soclib::caba::VciInitiator<vci\_param> p\_vci\_initiator : The VCI initiator port
- sc\_out<bool> p\_irq : Interrupt port

## 4) TLM-T Implementation

The TLM-T implementation is not yet available.
